                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           similarity).
-!- DOMAIN: The N-terminus (residues 1-275) possess a negative effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 on transactivation (By similarity).
--- DOMAIN: The C-terminus (residues 543-672) possess an activation domain (By similarity).
--- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

"A novel heterogeneous nuclear ribonucleoprotein-like protein
interacts with NSI of the minute virus of mice.";
J. Virol. 73:72-80(1999).
-I. FUNCTION: Seems necessary for viral DNA replication.
-I. SUBUNIT: Forms homooligomers. Interacts with human SYNCRIP.
-I. DOMAIN: The N-terminus (residues 1-275) possess a negative effect
                                                                                                                                                                                                                                                                                                                                                                                                       -!- SIMILARITY: Belongs to the parvoviruses noncapsid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

-!- CATALYTIC ACTIVITY: 5,10-methylenetetrahydrofolate + dUMP dihydrofolate + dTMP.
-!- PATHWAY: Deoxyribonucleotide biosynthesis.
-!- PATHWAY: Deoxyribonucleotide biosynthesis.
-!- SIMILARITY: Belongs to the thymidylate synthase family.
-!- SIMILARITY: BAB83676.1; -.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LINGUAGREE + GINE.

- LINGUAGREE + GINE.

- I STRILARITY: Decoxytbonucleotide biosynthesis.

- I SIMILARITY: Belongs to the thymidylate synthase family. BENDL, AK088134; BAC40165.1; -.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                             MEDLINE=22388257; PubMed=12477932; DOI=10.1073/pnas.242603899;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (GAN-2004) to the EMBL/GenBank/DDBJ databases.
--- CATALYTIC ACTIVITY: 5,10-methylenetetrahydrofolate + dUMP dihydrofolate + dTMP.
--- PATHWAY: Decoxyribonuclectide biosynthesis.
--- SIMILARITY: Belongs to the thymidylate synthase family.
